

Unsolved Homicide in California

This map shows the percent of unsolved homicides in each California County for the last 10 years. The percent was calculated by adding the total number of homicides from 2000-2009 and subtracting it from the total number of homicide clearances in the same time frame. The counties highlighted on this map represent 97% of all homicides committed in the state, and 99% of all unsolved homicides. Unsolved homicides were not calculated for the counties shaded in grey because those counties experienced 50 or fewer homicides in the last 10 years. Data for this map was obtained from the California Department of Justice Crime Statistics, available at <http://ag.ca.gov/cjsc/datatabs.php>.

Population Rank	County	Total Homicides, 2000-2009	Solved Homicides, 2000-2009	Unsolved Homicides, 2000-2009	% of Homicides Unsolved, 2000-2009
19	Monterey	284	105	179	63%
7	Alameda	1353	513	840	62%
